

## Links and Lists

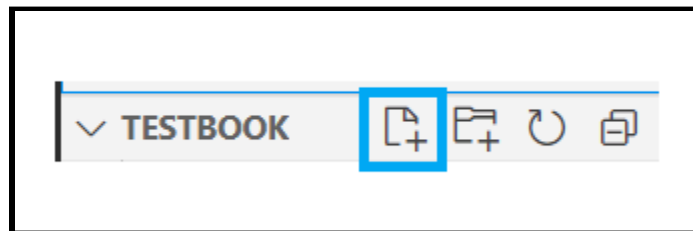

### Problem statement:

With your new gained knowledge on HTML Links and List prepare a list of

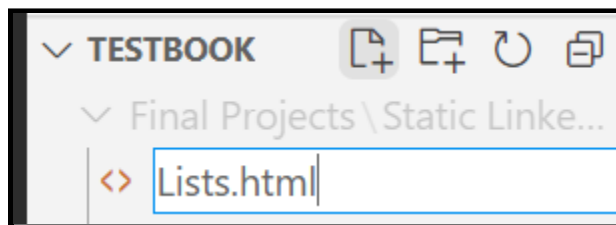

- Top Job alert websites links (unordered list).

### Steps:

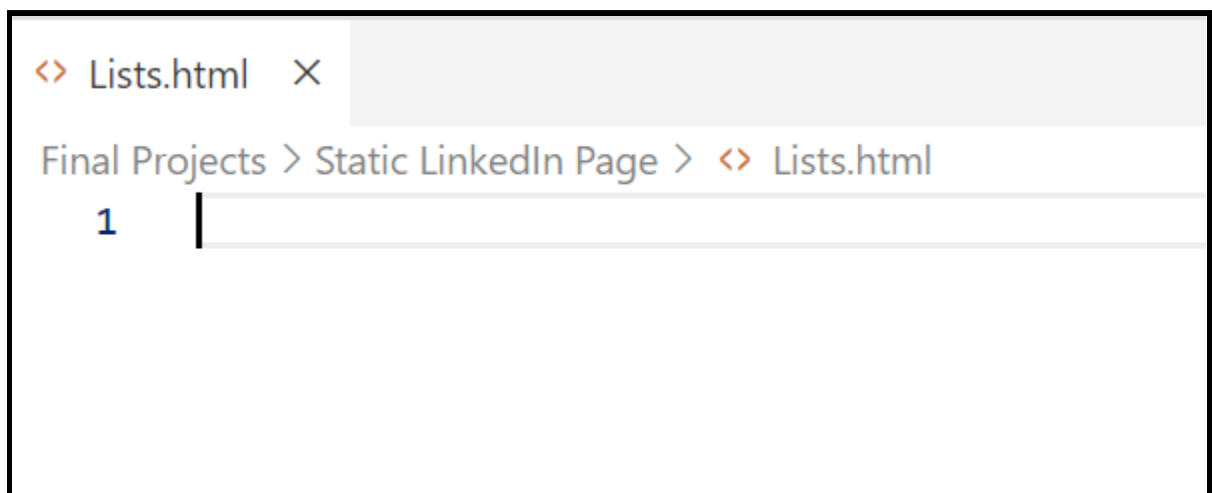

- Open VS code.
- Select New File in the opened folder...

- Save the file in the appropriate folder/ create the folder and save the file with extension.

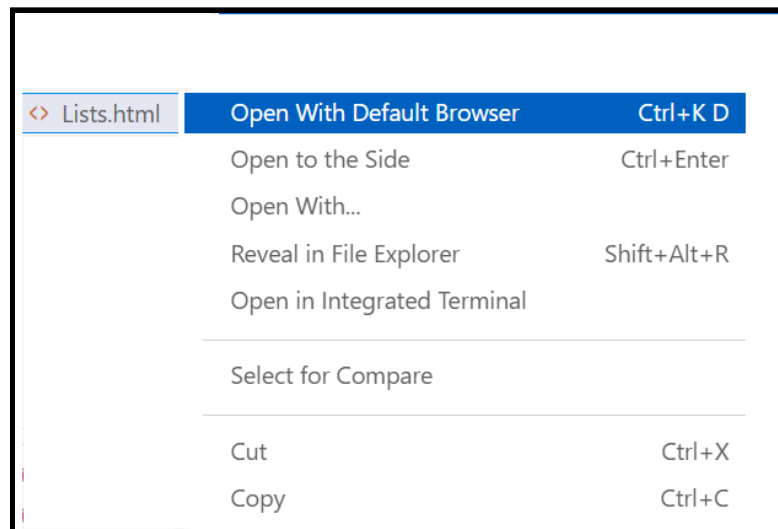

- The file in the VS Code appears with file extension after saving

### Sample code:

```
<!DOCTYPE html>
<html>
  <head>
    <title>HTML Links</title>
  </head>
  <body>
    <!-- You can add any heading-->
    <h2>Job websites</h2>
    <ul>
      <!-- You can add any job portals or website links that provide job
information-->
      <li><a href="https://www.linkedin.com/">LinkedIn</a></li>
      <li><a href="https://www.naukri.com/">Naukri</a></li>
      <li><a href="https://www.freejobalert.com/">FreeJobAlert</a></li>
      <li><a href="https://in.indeed.com/">Indeed</a></li>
    </ul>
  </body>
</html>
```

- View the file in the browser, by right click on the file name in the left pane.

Sample Output:
